

NV5

High-Performance Infrared Motion Detector

Small detector. Big capabilities.	
NV5 is the next generation of the ENVY Digital Detection series. NV5 has evolved from its predecessor NV500 - new firmware and improved hardware enables faster and more reliable detection, false alarm immunity and more, packaged in the sleek design you are familiar with.	
Click here to enlarge pictures	
Easy to install. Easy to use.	
	Average time to install: 5 - 10 minutes
	No PC board removal necessary, easy PC board installation, clip in/ out (when desired)
	Optional wall/ceiling mount bracket
	Panel compatibility: EVO, Spectra, Magellan, 3rd party
Faster & More Reliable* NV5 offers superior* (compared to Paradox PRO476 and NV500) :	
	Catch performance
	Even detection, no dead zones within the protected range
	Response to movements - slow and fast

	False alarm immunity Paradox technology, Auto Pulse Signal Processing (APSP) and Dual/Single Edge Processing enables flexibility in setting detection response time compared to false alarm immunity
	Digital temperature compensation — same catch capability at specified operating temperatures
	RF immunity
Customizable Sensitivity Levels	
	5 levels of sensitivity — choose level according to the needs of the protected area
	Pet resistant
	Adjustable creep zone — mirror add-on provides enhanced creep zone sensitivity and is recommended for best product performance
Paradox hybrid cylindrical-spherical Lens (patent pending)	
Paradox's Hybrid Cylindrical-Spherical takes the NV5 detection capabilities to a higher level than that of other detectors in this category. The Hybrid lens (3rd generation 3D LoDiff® Fresnel segments) offers the best detection possible for passive infrared energy reception for:	
1)	Far beams - cylindrical
2)	Medium/close beams/creep zone - spherical
